

What is Purified Recycled Water?

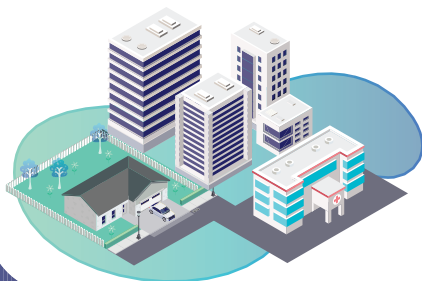

Purified recycled water is water recycled from industry and homes (including from kitchens, showers and toilets) that has been purified to meet strict Australian Guidelines for Water Recycling to supplement drinking water sources.

The future of water is here

With climate change and an increased demand on our water supplies, we need to think about water differently.

We must ensure we have a sustainable, reliable and safe water supply, that is independent of rainfall.

Greater Sydney relies on rainfall for

85 per cent
of its water supply

All water is recycled.

In the natural water cycle, there is no new water on Earth.

DID YOU KNOW?

Across the world, many cities use purified recycled water (PRW) as part of their drinking water supply.

We can use and reuse water more wisely to create cooler and greener cities, and future proof our water supply.
