

Refresh Vaucluse and Diamond Bay

Delivering our water future

Sydney Water is delivering a transformative investment in our city to ensure our water, wastewater and stormwater systems meet the needs of our customers now and in the future.

Our infrastructure delivery is timed to support the NSW Government's growth ambitions and is aligned with housing supply policy. New infrastructure, amplifications and upgrades will ensure the resilience and reliability of our water supply for generations to come.

The expansive program of work is being delivered across Greater Sydney, including the Blue Mountains and the Illawarra. A significant number of projects are currently in planning, while many are in delivery or have been completed.

Explore the [Major Projects Pipeline](#).

Sydney Water is committed to protecting the environment and delivering a permanent long-term solution to managing the last remaining untreated wastewater ocean outfalls in NSW. Below the cliffs of Vaucluse and Diamond Bay, untreated wastewater flows directly into the ocean. Sydney Water is building a new pump station at Parsley Bay to redirect untreated wastewater away from the ocean outfall in Vaucluse and transfer it to the Bondi treatment plant. We're also investigating upgrades to our network to redirect flows from the remaining two outfalls at Diamond Bay to the Bondi plant.

As part of this project, we will deliver:

- a wastewater pump station in the footprint of the current amenities block at Parsley Bay car park
- new bathroom and shower amenities
- 1.8 km wastewater pressure pipeline
- a pump station
- gravity wastewater pipelines
- pressure pipeline
- upgrade of existing pipes.

A delivery partner has been appointed to deliver the Parsley Bay component of the project. Construction will start mid-2024 and take approximately two years to complete.

Investment

\$50 - \$100
million

Benefits for our customers and communities

150-200 new jobs during construction and operation

93 per cent reduction in untreated wastewater entering the ocean

Delivering a permanent long-term solution to managing the last remaining untreated wastewater ocean outfalls in NSW

Reduce environmental risks to aquatic ecosystems on the Vaucluse peninsula

A wastewater pump station will be built in the footprint of the current amenities block.

Map is indicative and not to scale – proposed locations are subject to change during the detailed design phase
